Other Site Characteristics

Área montañosa de interés por sus hábitats forestales y de matorral, así como por la presancia de formaciones asociadas a los roquedos.

4.2 Quality and importance

Zona de media montaña mediterránea de especial interés por formar parte del gran núcleo forestal que ocupa el centro de las comarcas del sur de la Comunitat Valenciana. Mantiene una excelente representación de hábitats forestales -entre los que destacan los pinares y algunos fragmentos de carrascar-y sobre todo una gran varredad de matorrales, que reflejan en su composición los matices edáficos y especialmente el marcado gradiente ombroclimático existente entre las vertientes del macizo o, lo que es lo mismo, entre el ambiente subhúmedo y el semiárido alicantino. También merecen destacarse los hábitats asociados a la presencia de yesos.
