On 30 May 2018, the project LIFE TECMINE was presented in the local radio programme la Tarde de COPE. This program is dedicated to topics proposed by the Official College of Geomatic and Topographical Engineering and broadcasted every 15 days.

During the interview, we talked about mining activities and its impact on the territory and on the environment, and the necessary tasks to carry on in order to restore the affected area. Finally, we talked about the project LIFE TECMINE and why this project is necessary to solve problems not achieved by traditional restoration techniques.

The podcast of the interview is available online (link above).
